

Expert Lymphoma Treatment with BMT Clinic

What is Lymphoma?

- A type of blood cancer that begins in the lymphatic system.
- Affects lymphocytes, a kind of white blood cell that helps fight infections.
- Can spread to lymph nodes, spleen, bone marrow, and other organs.

Symptoms of Lymphoma

- Swelling in lymph nodes (neck, armpit, or groin)
- Persistent fever and night sweats
- Unexplained weight loss
- Fatigue and weakness
- Frequent infections

Types of Lymphoma

- Chemotherapy – destroys cancer cells.
- Targeted Therapy – attacks specific lymphoma cells.
- Immunotherapy – strengthens immune system to fight cancer.
- Radiation Therapy – controls localized tumors.
- Bone Marrow Transplant (BMT) – restores healthy blood cell production.
