

Comprehensive Guide to Limb Lengthening Surgery in India

 **Dr. NK Magu**

What Is Limb Lengthening Surgery?

A surgical procedure where a bone (e.g., femur or tibia) is cut and gradually pulled apart using an external or internal device. This stimulates new bone growth in the gap.

Stages:

- Distraction Phase: Bone segments are separated slowly (≈ 1 mm/day) to stimulate new tissue formation. Heights PlusTATA AIG
- Consolidation Phase: New bone hardens; device may be removed post-healing.

Benefits of Limb Lengthening Surgery

- Corrects limb length discrepancies caused by congenital issues, injuries, or growth disorders.
- Cosmetic height enhancement, improving body proportions and boosting self-confidence.
- Improves mobility, posture, gait, and overall quality of life.

Who Needs This Surgery?

- Individuals with unequal limbs (congenital or acquired).
- Patients with deformities such as bowlegs, knock-knees, or non-union fractures.
- People with dwarfism or growth disorders.
- Those seeking height increase for cosmetic reasons.

Understanding the Cost in India

- Significant cost savings – 30–60% lower than the US or Europe.
- High success rates (~95%), especially in accredited hospitals.
- Access to skilled surgeons and advanced implants (e.g., PRECICE nails).
- Strong medical tourism support for international patients.
