

Sickle Cell Anemia Treatment Cost in India

What is Sickle Cell Anemia?

A genetic blood disorder where red blood cells become sickle-shaped, blocking blood flow and causing pain, infections, and anemia.

Types of Treatment

Standard care includes pain management, antibiotics, vaccinations, and hydroxyurea. Advanced options are blood transfusions and Bone Marrow Transplant (BMT).

Why Choose BMT?

Bone Marrow Transplant replaces defective blood cells with healthy ones from a donor, offering a potential cure for sickle cell anemia.

Treatment Cost in India

The cost of BMT in India ranges from ■20–43.5 lakh (US \$24,000–52,000), depending on hospital, donor type, and medical care required.

Services Provided

Full services include diagnosis, donor matching, transplant procedures, infection prevention, and long-term follow-up care.
